SUMMARY

Dedicated Computer Science Engineering with a focus on Artificial Intelligence. Experienced in developing scalable and distributed software systems using languages such as **C/C++**, **Python**, and **JavaScript**. Proficient in working with **Unix/Linux** environments, **data structures**, **algorithms** and **software development**. Demonstrated ability to work on diverse projects including **machine learning**, **natural language processing** and large software systems. Actively engaged in computer science-related extracurricular activities and tech projects, showcasing a strong commitment to personal and professional development.

EDUCATION

IIITDM Kancheepuram

Bachelor of Technology in Computer Science with Artificial Intelligence

Chennai, Tamil Nadu

Nov. 2022 – June 2026

EXPERIENCE

Hackathon-Hackfest

NMAMIT

Bengaluru

- Designed a web-based solution for comprehensive inventory management where users can add various material types (raw materials, finished products, etc.) while maintaining detailed cost records.
- Frontend was crafted using **HTML**, **CSS** for a good user interface and **Javascript** ensuring responsiveness to the web-application.
- Backend was designed using **MySQL** as the primary database and the **Flask** framework for efficient routing and request handling.

PROJECTS

Traffic Sign Recognition | *Python, Keras, Tensorflow, OpenCV*

- Engineered a **supervised deep learning model** for identifying traffic signs under adverse lighting and weather conditions.
- Collected diverse datasets containing images of various traffic signs for model training and evaluation from **Kaggle** and Google Images.
- Implemented comprehensive data pre-processing techniques, including data cleaning, normalization, and feature extraction using libraries like **scikitlearn**, **OpenCV** etc.
- Split the dataset into training and testing sets to train the model.
- Developed the model using **convolutional neural networks** using **Keras**, **TensorFlow**.

Comprehensive Document to PDF Converter | *Html, Css, Javascript, Node.js, Express.js, Hopscotch.io*

- Designed a web application enabling users to convert various file formats into Portable Document Format (PDF).
- Developed the frontend using **HTML**, **CSS**, **Javascript** for a responsive user interface.
- Utilized **Node.js** as the runtime environment for the server-side operations.
- Used node packages such as **multer** for storage handling and file uploads and **libreoffice-converter**, **pdf-lib** to convert the given document into a PDF.
- Implemented **Express.js** for route and request handling.
- Managed dependencies and build processes with **npm** as the package manager.

TECHNICAL SKILLS

Languages: C/C++, Python, MySQL, JavaScript, HTML, CSS

Backend Frameworks: Node.js, Express.js, Flask

Developer Tools: Git, Google Cloud Platform, VS Code, Hopscotch.io

Libraries: pandas, NumPy, Matplotlib, Keras, TensorFlow

Package managers: apt, pip, npm
